## Labeling software
For Windows environments

SigmaLabel is a system allowing to easily manage the production of packing labels for the food supply industry and any other type of industry requiring the weighing and the identification of products. It is composed of an application functioning on a personal computer and of an application functioning on one or more programmable weighing indicators (**SigmaTerm** module).

SigmaLabel offers a simple and effective management of products and customers as well as specific information about the product-customer relationship such as the number of products of the customer, the price to be printed and the type of label to be used. It was conceived in order to minimize time necessary for the data management and to allow an optimization of the operations. The seizure and the information management are carried out on a computer. Thereafter, this information is transmitted automatically to the whole of the weighing indicators, being thus immediately available for the production of labels.

Information is entered into the computer and sent to weighing indicators

Weighing terminals

Weighings performed on each terminal are automatically transferred to the host computer as and when they are made, and the labels are printed. It is thus possible to monitor the real-time production from the main computer.

SigmaLabel

An Efficient Management

SigmaLabel is a management software designed specifically for the labeling of products. With our expertise in software, networks and scales, we are able to offer you IT management solution that is simple, efficient and fast allowing you to increase productivity and profitability of your business.

User Friendly

The **SigmaLabel** software takes full advantage of the features and flexibility of Windows. Easy to learn, it allows any operator to be quickly operational.

Main Characteristics

. Printout of parcel, box and skid labels
. Automatically fox box and skid labels
. Labels for pre-wrapped products

. Categorizing of products
. Ingredients and nutritional information list
. Prices definable by product and by
  product-client relationship

. Summary production report
. Detailed production report

. Exportation of production data in
  Excel and XML format

. Manual or automatic mode weighing
. Information access security
. Single-user operation or in network
. Bilingual
